EDUCATION

Far Eastern University - Institute of Technology

BS Computer Science, Expected graduation of 2027

- Rank 2 of Top Performing Student A.Y. 2023 - 2024 | Rank 8 of Top Performing Student A.Y. 2024 - 2025 | Consistent Dean's lister | Elite Scholar | DOST-SEI Scholar

EXPERIENCE

FEU TECH ACM Student Chapter

Lead Web Developer for ACMX

August 2025 - Present

- Led a web development team composed of beginner and junior developers for the FEU Tech ACM Student Chapter website in designing simple system architectures and skill building associated with web development.
- Developed a full-featured Next.js 14 (App Router) + TypeScript e-commerce platform for official ACM merchandise, optimized for mobile and desktop with Tailwind CSS UI to be utilized by 400+ members of the organization.

Director for Academics

August 2024 - August 2025

- Led the academics committee and organized academic support initiatives and review sessions for students.
- Facilitated peer tutorials and helped address course-related challenges across student cohorts.
- Designed and implemented institute competitions while coordinating with multiple committees.

PROJECTS

KitaKo (Undergraduate Thesis - Image retrieval system using Taglish queries)

- Fine-tuned SigLIP-2 via LoRA (0.32% trainable params) on a 109K-image Taglish dataset, improving Filipino-query fairness (DPR: 0.43→0.86) and reducing cross-language bias by 60% (TVD).
- Built a fully on-device multimodal image retrieval system for Android, covering dataset construction, ONNX INT8 quantization, HNSW/IVF-PQ ANN indexing, and Flutter + C++ FFI inference with no cloud dependency.
- Designed a Taglish (Tagalog-English code-switching) retrieval pipeline achieving near-complete language parity between Taglish and English queries (mAP: p = .920, d = -0.01) on a structured IR benchmark.

STARSTight (Decision support system)

- Developed the Underserved Area Index (UAI), a weighted composite score across 5 domain-validated factors — with a template-based explainer that produces traceable, plain-language justifications for every division ranking.
- Delivered a full end-to-end data product with a rule-based intervention recommender, validated through field interviews with active STAR program stakeholders.
- Developed a system that integrates five fragmented government datasets (DepEd HRIS, NEAP, PRC, NAT, EBEA) into a unified, schema-standardized pipeline producing division-level analytics across 86 divisions in the Philippines.

TECHNICAL SKILLS

- Programming Languages:** Python, C++, JavaScript, Java
- Front-End:** React.js, Next.js, Tailwind CSS, HTML, CSS
- Back-End & API Development:** Node.js, Flask, FastAPI
- Databases:** MySQL, PostgreSQL, Supabase, SQLite

COMPETITIONS & AWARDS

- 3rd Runner up - First Gen Code Green (2024) - National Pitching Competition
- Algolympics 2025 Finalist - National competitive programming contest
- Level 3 in 13th Test of Practical Competency in Information Technology (TOPCIT 2025) - International exam
- Start-A-Ton Finalist: START-DOST Datathon 2026
- 3rd Place - FEU Tech Open AI Campus Hackathon 2026
